HelixTrack Screensaver

The HelixTrack screensaver for the Mate desktop environment.

How to install

Follow these installation instructions:

- Clone the Software Toolkit into the desired directory and cd into it

- Execute the initialize.sh:

  ```
  initialize.sh ~/Documents/Project_Directory "My project name"
  ```

  Where 1st parameter is path for the installation and the 2nd one is the name of the toolkit project to assign,

- Once all Git submodules are initialized and cloned add the Installable module's directory into the system path

- Reload your .bashrc or .zasrc configuration

- Download or clone the Screensaver into the desired directory and cd into it

- Execute: install.sh, this will execute the prepare.sh and install.sh scripts from the Recipses directory.

Installation will be performed by default into /usr/share/applications/screensavers directory. To override this export the environment variable HELIX_TRACK_SCREENSAVER_DIR with the value of desired path. For example:

```
export HELIX_TRACK_SCREENSAVER_DIR="/home/user/somewehere/to/install"
```
